

Materials Science and Engineering

A black and white scanning electron micrograph (SEM) showing a complex, fibrous, and porous material structure. The image displays a dense network of interconnected fibers and filaments, creating a highly textured and intricate surface. The overall appearance is that of a woven or spun material, possibly a textile or a specialized polymer composite.

Materials Research Forum LLC
www.mrforum.com

Welcome to Materials Research Forum LLC' complete 2025 Fall Publications Catalog. It describes all 237 books, electronic products, and proceedings we currently publish.

Materials Research Forum LLC, is located in Millersville, PA.

The policy of Materials Research Forum LLC is to focus on materials related research and serve the individual publishing needs of researchers in this field. At the same time our vision is to deliver the most up-to-date knowledge of current research and information tools useful to this community.

The publishing house is managed by Thomas Wohlbier who has served the publishing community, especially the materials research community, for over 30 years. During his 12 years as Director of Publication at a Swiss publishing house he initiated and oversaw the publication of over 2000 titles including monograph books, special topical volumes and conference proceedings volumes.

Applications for Earth-Abundant Transition Metals

Eds. Inamuddin, Arwa Alrooqi, Hind Alluqmani, Mohammad Abu Jafar Mazumder

Earth-abundant transition metals - such as iron, copper, manganese, cobalt, and nickel - offer viable alternatives to expensive noble metals commonly used in the fields of catalysis, environmental science, materials chemistry, pharmaceuticals, and sustainable energy. The book presents a comprehensive compilation of recent studies that leverage the potential of these metals across various industries.

Catalysts, Solid Propellants, Therapeutics, Solar Cells, Supercapacitors, Chemical Sensors, Water Treatment, Hydrogen Production, Hydrogen Evolution

Applications of Polymers in Surgery II

Eds. Inamuddin, Arwa Alrooqi, Amal Alshehri, Hind Alluqmani, Mohammad Abu Jafar Mazumder

Polymers permeate nearly every aspect of life, including biomedical applications and energy storage devices. The present book explores the diverse applications of polymers in advanced medical surgery; ranging from tissue engineering, wound dressings, and implanted medical devices to blood vessel reconstruction, drug delivery and dentistry.

Printed Polymers, Sealants, Adhesives, Surgery Implants, Cardiovascular Surgery, Neurosurgery, Orthopedic Surgery, Tissue Engineering, 3D Printed Scaffolds, Dosage Forms, Drug Delivery, Wound Care, Implant Devices, Retinal Prosthesis, Vascular Applications, Human Health, Dentistry, Blood Vessels

Calcium-Ion Batteries

David J. Fisher

Due to the limited availability of lithium in the world, there is much research on the possibility of using calcium instead of lithium. Calcium is 2500 times more plentiful than lithium. The book reviews recent research on identifying suitable electrode and electrolyte materials based on calcium ions. It references 167 original resources with their direct web links for in-depth reading.

Emerging Materials for Next Frontier Energy and Environment Applications

Eds. Alagarsamy Pandikumar, Mani Alagiri

This book focuses on (1) photocatalysis in environment remediation, i.e. the removal of pollution or contaminants from water, (2) electrode materials for electrocatalytic hydrogen production and supercapacitors, and (3) hydrogen generation and storage. The electrocatalytic hydrogen evolution reaction turns out to be a very effective method for converting sustainable energy into a clean energy carrier.

Supercapacitors for Energy Storage, Photocatalysis, Electrode Materials, Biomass Derived Carbon, MOF Electrode Material for Supercapacitors, Transition Metal Oxides, Transition Metal Chalcogenides

Energy-Harvesting Materials

David J. Fisher

Energy harvesting refers to the derivation of energy from a great number of sources, such as solar energy, wind energy or the kinetic energy that is present in a car in motion and can be recuperated when we step on the brakes. The book presents examples of energy-harvesting which involve only imperceptible effects on the user, or which involve large-scale phenomena where individuals are not involved. The former choice has come to center largely on the use of nanomaterials, piezoelectricity and tribo-electricity to harvest the energy involved in a wide range of everyday activities that encounter vibrations, impacts, etc. The book references 200 original resources with their direct web links for in-depth reading.

Triboelectric Harvesters, Piezoelectric Harvesters, Waste-heat Harvesting, Vibrational Energy-Harvesting, Microelectromechanical Sensor, Eutectogels for Flexible Electronics, Thermal-Energy Storage, Hydrogen-Storage, Photocatalytic Water-Splitting, Natural Rubber Composites, Dielectric Elastomers, Salinity-Harvesting, Ultra-Strong Nanocomposite Membrane

The Strength-Ductility Paradox

David J. Fisher

The strength-ductility paradox originally referred to the fact that the plasticity of titanium is improved when subjected to high-pressure torsion. This is also known as the SPD-paradox, where SPD is the initialism of severe plastic deformation. Today, we know that short-term annealing of the deformed material increases the strength and ductility simultaneously. The same phenomenon is also observed in other pure metals, in alloys and in metal-matrix composites. The book reviews the strength-ductility paradox in a wide range of materials, and the range of mechanisms involved. The book references 119 original resources with their direct web links for in-depth reading.

Transparent Metals

David J. Fisher

There is much current interest in transparent metallic materials. These are optical materials based upon photonic band-gap structures which are created by combining films of metals and dielectrics. Transparent materials are used to produce devices having electrically variable optical properties. Such photonic devices exhibit increased speeds of operation, reduced size and increased immunity to temperature changes. The book references 202 original resources with their direct web links for in-depth reading.

Vernacular Architecture

Support for Territorial Development

Eds. Hassane Kharmich, Khalid El Harrouni, Khadija Baba, Khadija Karibi

Vernacular architecture refers to regional buildings. It utilizes resources from the region in which the buildings are situated. This type of architecture reveals a collective heritage, embodying the diversity and richness of natural, human, and socio-cultural contexts. Vernacular architecture thus is the result of ancestral knowledge in the use of local materials and pure craft techniques. The book focuses on four topics: (1): Richness and diversity of forms of expression; (2) Restoration issues and revitalization challenges, (3) Natural risks and resilience, and (4) Vernacular architecture as a source of inspiration and a lever for development.

Coastal Vernacular Architecture, Climatic and Cultural Challenges, Intellectual Representations, Traditional Earthen Architecture, Environment and Restoration, Thermal Storage Materials, Arid Environments, Heritage Preservation, Biopolymer Composite Materials, Hydrography, Tented Living, Seismic Hazards, Seismic Resilience, Bio-Sourced Materials, Geophysical Characterization, Sustainable Territorial Design, Solar Collector, Thermal Storage, Rammed Earth Buildings, Resilient Architecture, Energy-Efficient Buildings, Hydraulic Networks

Superhydrophobic Metal Surfaces

David J. Fisher

The fact that water droplets are far from wetting the surface upon which they stand leads to many associated tendencies, such as impeding fogging, icing and corrosion. The book covers the ways in which superhydrophobicity has been imparted to metals. Metals themselves tend more naturally to be hydrophilic; and so imparting superhydrophobicity relies upon adding some sort of coating. Novel Approaches in Materials and Technologies for Building Construction

Mohammad Arif Kamal, Rupesh Manohar Surwade, Abhishek Mahendra Bangre

The book discusses the latest developments in the area of building constructions. Most of the building components such as columns, roofs and concrete blocks are available in prefabricated forms that increase the speed of construction processes. The goal is to engineer buildings that are sustainable, efficient, resilient, economically viable; and ensure the safety, health and comfort of occupants. New materials and technologies aim at energy efficiency, water conservation, improved indoor air quality, durability and low life cycle and maintenance costs.

Building Materials, Columns, Roofs, Concrete Blocks, Prefabricated Forms, Greenhouse Gas Emission, Energy Efficiency, Water Conservation, Air Quality, Life Cycle Cost, Maintenance Costs, Calcium Silicate Bricks, Autoclaved Aerated Concrete Blocks, Hydraform Interlocking Block Walling System, Reinforced Hollow Concrete Block Masonry, 3D Printing Technology, Structural Insulated Panels, Glass Fibre Reinforced Gypsum Panels, Monolithic Concrete Construction Technology, Formwork System for Building Construction, Insulated Roof, Wall Tiles, Metal Roofing System, Warehouses

Recent Advances and Allied Applications of MXenes

Eds. Inamuddin, Mohammad Abu Jafar Mazum, Mohamamd Luqman, Mohammad Faraz Ahmer

Since 2011, the MAX phase derivatives MXenes are constantly expanding in terms of crystallographic and composition variability. Several advancements have been made in the previous few years that have accelerated the production of novel MXenes with better chemical diversification and crystal structures. This book is intended to present the latest applicational advancements of MXenes in diversified sectors.

MAX Phase, MXene, MXene-Based Composite, MXene Symmetric Supercapacitor, MXene Asymmetric Supercapacitor, MXene Micro Supercapacitor, MXene Transparent Supercapacitor, 2D Materials, EMI shielding, Nanophotonics, MXenes in Photodetectors, MXenes in Electrocatalysis

Third Generation Photovoltaic Technology

Recent Progress and Future Perspectives

Eds. Alagarsamy Pandikumar, G. Murugadoss

Third-generation solar cells (SCs) are built on inorganic nanoparticles, hybrids, or semiconducting organic macromolecules. This book focuses on dye-sensitized solar cells, polymer/organic solar cells, copper/zinc/tin sulfide thin film cells, quantum dot solar cells and perovskite-based solar cells. Specific topics covered include device architecture, interface engineering, characterization, and fabrication techniques such as spin coating, blade coating, slot-die coating, dip coating, meniscus coating, spray coating, ink-jet printing, screen printing and electro deposition.

Topological Insulators

Materials and Applications

Eds. Inamuddin, Tariq Altalhi, Mohammad Abu Jafar Mazumder

A topological insulator is an area that has yet to be fully explored and developed. The charge-induced bandgap fluctuation in the best-known bismuth-chalcogenide-based topological insulators is approximately 10MeV in magnitude. The major focus has shifted to the investigation of the presence of high-symmetry electronic bands as well as the utilization of easily produced materials. As the subject of topological insulators is still in the nascent stage, there is growing research and knowledge in the emerging field. This book is intended to provide the readers with an understanding of the needs and application of these materials.

New Materials for a Circular Economy

Eds. Alberto García-Peñas and Gaurav Sharma

A circular and environment-friendly economy could displace the linear economy as it is in use around the world. This would involve enlarged life cycles for products, and an increase in the efficiency of electric and electronic devices. The generation of new materials will be essential, as well as materials recycling or conversion after use. This book discusses new ways of production, management, recycling and conversion of new and regular materials.

Microplastics, Lignocellulose-Based Materials, Food Packaging, Biorefinery, Solar Energy, Reused Materials, Recycling of Plastics, Biopolymers, Composites, Polymeric Systems, CO2 Capture, Anticorrosive Polymeric Coatings, Metallic Structures, Scrap for New Steel, Nanomaterials, Waste from Electronic Components, Future of Cars, Raw Materials, Biomaterials, Bioeconomy, Circular Bioeconomy, Polymeric Electrolytes, Fuel Cells

An Introduction to Hard Ferrites

From Fundamentals to Practical Applications

Eds. Gagan Kumar Bhargava, Pankaj Sharma, Sumit Bhardwaj, Indu Sharma

Due to their excellent magnetic characteristics, hard ferrites have many high-tech applications in such areas as permanent magnets, storage devices, HF Antenna and Spin Transmission. The present book reviews the present knowledge of these materials; their processing, characterization and potential applications. The book is also useful as an introductory text for students at the postgraduate research level.

Hard Ferrites, Synthesis, BaFe₁₂O₁₉, SrFe₁₂O₁₉, Magnetization, Miniaturization, EMI Shielding, Ferrofluids, Nanomaterials, Nano-Floating Gate, Permanent Magnets, Recording Media, High-Frequency Antenna, Radar Applications, Memory Devices. Spin Transmission, Spinel Model, Synthesis Methods

Ion Exchange Resins

Biomedical and Environmental Applications

Eds. Inamuddin, Maha Khan,

Mohammad Abu Jafar Mazumder, Mohammad Luqman

The book focuses on the applications of ion exchange resins in processes such as the separation and purification of proteins and vitamins, the selective separation of toxic metals and the separation and purification of bioactive molecules. Specific topics include drug delivery, clinical applications, water softening and sustained drug delivery.

Ion Exchange Resins, Protein Separation and Purification, Partition and Purgation of Vitamins, Toxic Heavy Metal Ions, Bioactive Molecules, Sustained Drug Release, Ion-Exchange Chromatography, Clinical Applications, Electrodialysis, Ultrasound, Water Softening

Magnetic Nanoparticles for Biomedical Applications

Eds. Martin F. Desimone and Rajshree B. Jotania

Magnetic nanoparticles (MNPs) have many applications in the biomedical field because of their non-toxicity, high chemical stability, and biocompatibility. They are used in DNA or protein separation, hyperthermia, tissue engineering, magnetic resonance imaging, cancer therapy, drug delivery, bone and dental repair, biosensors, etc. The book focuses on magnetic nanoparticles and coated nanoparticles (ferrites nanoparticles, bimetallic-magnetic nanoparticles, magnetic fluid); their synthesis, characterization, and in vivo or in vitro biomedical applications.

Iron Oxide Magnetic Nanomaterials, Magnetic Spinel Ferrite Nanoparticles, Magnetic Oxide Nanoparticles, Ferromagnetic Nickel Nanostructures, Cobalt Ferrite with Niobium Pentoxide, Hyperthermia, Oncologic Magnetic Thermo-therapy, Cancer Therapy, Cancer Diagnosis, Drug Delivery, Immune System Related Diseases

Multiferroic Materials

R. Saravanan

The magnetoelectric properties of multiferroic materials have a high potential for applications in the fields of data storage, spin valves, spintronics, memories, sensors and microelectronic devices. The book presents both a detailed literature review of the field, and the experimental results obtained from various characterization and analytical techniques performed on four series of lanthanum orthoferrite type multiferroics. These materials have been used in solid oxide fuel cells (SOFC), magneto-hydrodynamic power generation (MHD), capacitors and energy storage devices in microelectronics, non-volatile magnetic memory devices and ferroelectric random access memories (Fe-RAM).

Multiferroics, Lanthanum Orthoferrites, Ferromagnetism, Ferroelectricity, Electrical Conductivity, Thermal Stability, Dielectric Constant, Solid Oxide Fuel Cell (SOFC), Magneto-Hydrodynamic Power Generation (MHD), Capacitors, Energy Storage Devices, Magnetic Memory Devices, Ferroelectric Random Access Memories (Fe-RAM), Charge Density Measurements

The Boron Arsenides

David J. Fisher

Boron Arsenide offers very interesting electronic properties, as well as a high thermal conductivity; nearly 10 times higher than that of silicon. It has been hailed as 'the best semiconductor material ever found'. The present book presents a detailed review of this material and its potential applications. The materials covered include Icosahedral Boron Arsenide, Hexagonal Boron Arsenide, Amorphous Boron Arsenide and Cubic Boron Arsenide. The book references 166 original resources with their direct web links for in-depth reading.

Transition Metal Doped Spintronics Materials

R. Saravanan

The book presents new research on the synthesis and characterization of various oxide based dilute magnetic spintronics materials (ODMS). The characterization techniques included powder X-ray diffraction, scanning electron microscopy, vibrating sample magnetometry and UV visible spectrometry. The morphological, magnetic and optical properties are reported. Electron density distribution studies are presented in the form of three, two and one dimensional electron density maps.

Spintronics Materials, Zn_{1-x}Ti_xO, Zn_{1-x}Fe_xO, Zn_{1-x}V_xO, Zn_{1-x}Ni_x/2V_x/2O, Synthesis, X-ray Diffraction, Rietveld Analysis, Surface Morphological Properties, Optical Properties, Magnetic Properties, Charge Density Analysis, Electron Density Distribution

3D Concrete Printing Technology

Configuration with Green and Self-Healing Concrete

Tejwant Singh Brar, Mohammad Arif Kamal, Shubham Singh

The book presents a detailed comparison between traditional construction techniques and 3D printing construction. The comparison focuses on four primary parameters: mechanism, composition, time and cost. The operational details of each technology (cast-in situ, pre-stress, post-tension) are reviewed and comparison criteria for all techniques are formulated. In conclusion, 3D printing seems to be well on its way to transform the whole construction industry.

Floating Offshore Energy Devices

GREENER

Eds. Ciarán Mc Goldrick, Meriel Huggard and Biswajit Basu

This new conference series aims at presenting state-of-the-art research in the development of offshore energy machines and devices. Topics covered include: Present and future offshore wind and wave devices; innovations in modelling, design, control, operation and testing of offshore energy machines, and the impact of these devices on the marine environment.

Oscillating Water Column, Monitoring of Wind Turbines, Coriolis Effect, Internal Ocean Waves, Rapid Distortion Theory, Modelling of Ocean Wave Energy Converters, Pendulum-Type Vibration, Wind Turbine Fault Prediction, Short-Term Wind Power Forecasting, Floating Tidal Energy Conversion, Antarctic Circumpolar Current, Shallow Water Large Scale Modelling

Modern Trends in Manufacturing Technologies and Equipment

ICMTMTE 2021

Eds. Sergey Bratan and Stanislav Roshchupkin

The book presents the proceedings of the International Conference on Modern Trends in Manufacturing Technologies and Equipment, held in September 2021 in Sevastopol, Russia. The aim of the conference was to provide scientists and industrial researchers with the latest developments in manufacturing technologies, materials research, manufacturing equipment and tools, and to build up partnerships for future collaboration.

Welded Joints, Dry Building Mixtures, Tribological Properties of Sapphire, Direct Metal Deposition Modes, Production of Artificial Concrete, Wooden Structures,

Rolls for Helical Rolling, Laser Treatments, Electromechanical Surfacing, Luminous Phosphate Coatings, Ventilated Brake Discs, Cutting Zone, Models for Wind Tunnels, Gas-Thermal Spraying, Water-Abrasive Cutting, Grinding Forces, CVD Coatings, Carbonate Concrete, Photocatalytic Activity of Tungsten Oxide, Maraging Steel, Corrosion of TiNi Alloy, 3D Printing, Production of Ultramarine, Injection Molding, Elastomeric Composites, Reinforcing Bars Inside Concrete Structures, Coatings for Cutting Tools, Hard Alloy Tools

Recycling of Rare Earths

David J. Fisher

The recycling of rare earth elements is one of the great challenges for establishing a green economy. Rare earths play an essential role in a great many high-tech products and processes: electronic display screens, computer monitors, cell phones, rechargeable batteries, etc. Recycling these materials not only results in valuable materials for new products; it also helps in reducing mountains of discarded products. The recycling methods discussed include bioleaching, biosorption, siderophores, algae and seaweed, carbon-based nanomaterials, silica, pyrometallurgy, electrochemistry, hydrometallurgy, solvent extraction and the use of various absorbents. The book references 253 original resources with their direct web links for in-depth reading.

A Comprehensive Method for Concrete Mix Design

Kambiz Janamian and Jose Aguiar

A novel method of concrete mix design is presented. Tests with various constituent materials are reported in great detail. Both laboratory tests and applications in industry show the method to be very successful for all kinds of normal constituent materials, including silica fume, ground granulated blast furnace slag, fly ash, natural pozzolans, blended cement, fine and coarse aggregates, water, air entraining admixtures, plasticizers and super-plasticizers.

Advanced Applications of Bio-degradable Green Composites

Eds. Amir Al-Ahmed and Inamuddin

The book reports progress on the development of new biodegradable polymers, composites and nanocomposites for use in such areas as drug delivery, packaging, food and agricultural technology. The world has become increasingly worried about non-degradable polymers used in our daily activities. Hence, biodegradable polymers and composites are of growing demand to replace petroleum based polymers and products.

Advanced Applications of Polysaccharides and their Composites

Eds. Amir Al-Ahmed and Inamuddin

Polysaccharides and their composites are highly promising materials for food, pharmaceutical and biomedical applications; including drug delivery, tissue engineering and packaging. Fiber- and nano-reinforced composites are good alternatives to non-biodegradable petroleum-based polymers. The great advantage of these materials is that they are both environment friendly and nontoxic.

Alternative Concrete – Geopolymer Concrete

Emerging Research and Opportunities

Adrian LĂZĂRESCU, Henriette SZILÁGYI, Cornelia BAERĂ, Andreea HEGYI

Portland cement based concrete is the most versatile, durable and reliable building material. Unfortunately, the production of Portland cement is environmentally unfriendly. An interesting alternative is provided by alkali-activated geopolymer materials (AAGM). This book focuses on fly ash-based alkali-activated geopolymer concrete, its production and characteristic properties. The re-use of waste materials and industrial by-products, such as fly ash, is not only economically of interest but also helps to reduce carbon dioxide emissions.

Applications of Adsorption and Ion Exchange Chromatography in Waste Water Treatment

Eds. Inamuddin and Amir Al-Ahmed

The ion-exchange process is a natural phenomenon and mankind has been using this technique since the early days of civilisation. With the progress of technologies and concepts, we got a better understanding of this technique and increased its application horizon. Like in other research areas, nanotechnology has also penetrated heavily into this field, and has helped develop smart materials with better properties for application in adsorption and ion-exchange chromatography. A large amount of research was carried out in this field in the last few decades, showing the importance of these materials and technologies.

Water treatment is receiving great attention worldwide, due to the increasing demand of drinking water and hence the need to recycle polluted water sources. Keeping this importance in mind, this book "Applications of Adsorption and Ion Exchange Chromatography in Waste Water Treatment" has been edited with contributions from well know experts in the field, who have been working on different ion-exchange materials and technologies for many years.

Carbon-Capture by Metal-Organic Framework Materials

David J. Fisher

Metal-Organic Framework Materials (MOFs) are well suited for absorbing carbon dioxide. MOFs can form highly-porous structures with great adsorption capacities. They also offer good catalytic properties and much research refers to the relationship between catalytic performance and framework structure. In addition to simple CO₂ absorption, there are other interesting applications, such as the direct electrochemical reduction into useful chemicals and fuels, the conversion of CO₂ into methanol, the electrochemical reduction of CO₂, or electrocatalytic hydrogen evolution (thus boosting the 'hydrogen economy'). The book references 295 original resources and includes their direct web link for in-depth reading.

Cork Science and its Applications

Eds. Ricardo Sousa and Ofélia Anjos

Cork and cork agglomerates are natural cellular materials that are receiving much interest in a number of technological applications, e.g. as Feedstock for the Additive 3D Printing Technology; Solar, Wind and Bioenergy applications; Sorbent for Pesticides and Heavy Metals; and Water Treatment. Experimental, analytical and computational research is reported, as well as new applications in fields ranging from design and architecture to mechanical, chemical, civil and electronics engineering.

Current Trends on Lanthanide Glasses and Materials

Ed. Sooraj Hussain Nandyala

This monograph covers the latest developments in lanthanide doped glasses and phosphor materials. The book aims to explain the basic functioning mechanisms of phosphor materials, and the luminescence behaviour of glasses doped with certain lanthanide ions. It also describes how to plot colors in a CIE chromaticity diagram.

The book will be of use for senior researchers, materials scientists, chemists, physicists, engineers, as well as research students to gain knowledge on current developments of these materials.

Detectors and Sources for THz and IR

Fedir F. Sizov

IR and THz technologies are widely used in security screening and surveillance, astronomy, spectroscopy, biomedicine, food and package inspection, detection of concealed weapons, vision through camouflage, etc. There are increasing demands for the fast transmission of large amounts of data. THz radiation penetrates dielectric materials like plastics, ceramics or cardboard allowing contact-free testing. Medical imaging technologies can provide guidance for surgeons in delimiting the margins of tumors, help clinicians to visualize diseased areas, etc.

Dielectric Materials and Applications

ISyDMA'2016

Eds. Mohammed Essaid Achour, Rajaa Touahni, Rochdi Mesroussi, Mohammed Elaamni, Mustapha Ait Ali

The First International Symposium on Dielectric Materials and Applications (ISyDMA'2016) was held in Kenitra (4 May, 2016) and in Rabat (May 5-6, 2016), Morocco. ISyDMA'2016 provided an international forum for reporting the most recent developments in Advanced Dielectric Materials and applications.

The goal of this collection of peer reviewed papers is to provide researchers and scientists from all over the world with recent developments in dielectric materials and their innovative applications. The book will be useful for materials scientists, physicists,

chemists, biologists, and electrical engineers engaged in fundamental and applied research or technical investigations of such materials.

Elemental Graphene Analogues

D.J. Fisher

A recent innovation has been the discovery and preparation of graphene; single-monolayer carbon having a remarkable strength. This success has naturally led researchers to ask whether other materials might also be prepared in an analogous monolayer form and offer similarly amazing properties.

The present monograph summarizes all of the work carried out on such monolayer materials up to the beginning of 2017, with attention being restricted to those, like graphene, being composed of a single element. Most of the work done so far on these 'elemental graphene analogues' has been theoretical, but the existing experimental data suggest that they may well become as useful as graphene.

Innovations in Army Energy and Power Materials Technologies

Eds. Edward C. Shaffer, Tsvetanka S. Zheleva

This compendium reports fundamental science and engineering advances of the US Army Research Laboratory (ARL) within the area of Energy and Power technologies. Although, in general, ARL's Materials Research encompasses a broad range of materials technologies (e.g.: Photonics, Electronics, Biological and Bio-inspired Materials, Structural Materials, High Strain and Ballistic Materials, and Manufacturing Science), this publication specifically addresses selected energy and power material related work at ARL. While this work includes electrochemical energy storage (batteries and capacitors) and electrochemical energy conversion

(fuel cells, photoelectrochemistry, and photochemistry), special emphasis is given on electrochemical energy storage:

Innovative Materials and Techniques for Osteochondral Repair

Horea Rareș Ciprian Benea

The book presents research in treating focal joint cartilage defects. Lipoaspirate fluid (LAF) cells have important applications in such areas as orthopedics, general surgery, plastic and repair or vascular surgery. Also discussed are cartilage tissue regeneration therapies using collagen scaffolds and multipotent mesenchymal cells; this offers the possibility of making real "biological arthroplasties". The regeneration of cartilage tissue by injecting stem cell concentrates gives hope to patients suffering from cartilage degradation.

Magnetic Oxides and Composites

Eds. Rajshree B. Jotania and Sami H. Mahmood

Magnetic oxides, their composites and nanoparticles are uniquely suited for a wide variety of applications in new technologies, including device miniaturization, power efficiency improvement and health sector innovations. The interest in these materials is due to such properties as high resistivity, low dielectric and magnetic losses, good corrosion resistance and favorable mechanical characteristics. The book focuses on the relevant basic concepts, as well as on synthesis routes and important applications of spinel ferrites, hexaferrites and magnetic oxide nanomaterials.

Magnetocaloric Effect in Perovskite Manganites

H. Gencer, V.S. Kolat, T. Izgi, N. Bayri, S. Atalay

For environmental concerns, it is highly desirable to replace gas-based refrigeration by magnetic refrigeration. Magnetic refrigeration has significant advantages such as small volume, chemical stability, low cost, non-toxicity and not causing sound pollution. Among the pertinent magnetocaloric materials, perovskite manganites are of special interest because they exhibit extremely large magnetic entropy and adiabatic temperature variations, a small thermal or magnetic hysteresis, high chemical stability. Further, the Curie temperature and saturation magnetization can be tailored by changing doping element and doping concentrations. The book references 289 original resources and includes their direct web link for in-depth reading.

Mechanochromism

David J. Fisher

Mechanochromism (or piezochromism) refers to the emission of radiation as a result of the stressing, deforming or breaking of solids. The great current interest in these processes is due to the immense potential for monitoring and recording stresses, wear and fracture. There is, for instance, the possibility of turning such materials into optical pressuresensors and structural damage sensors. Mechanochromic polymers, for example, could visually signal sub-micron damage and failure long before macroscopic cracks became detectable. The range of such high-tech applications is almost unlimited. The book references 325 original resources and includes their direct web link for in-depth reading.

Microbial Fuel Cells

Materials and Applications

Eds. Inamuddin, Mohammad Faraz Ahmer et al.

Microbial fuel cells are very promising as renewable energy sources. They are based on the direct conversion of organic or inorganic materials to electricity by utilizing microorganisms as catalysts. These cells are well suited for applications that require only low power, e.g. ultracapacitors, toys, electronic gadgets, meteorological buoys, remote sensors, digital wristwatches, smartphones and hardware in space and robots. In addition to electricity generation, microbial fuel cells can be used for wastewater treatment, desalination and biofuel production. The book addresses characterization techniques and operating conditions of microbial fuel cells, as well as the usefulness of various types of anode and cathode materials.

Negative Thermal Expansion Materials

D.J. Fisher

All you want to know about negative thermal expansion materials in an easy to read condensed format. In everyday life, minute thermally-induced elongations are essentially invisible to the naked eye; but even minute expansions can fatally degrade device processing and performance in – for example – the semiconductor industry. Materials which, astonishingly, contract upon heating offer the great advantage of being able to tune the overall thermal expansion of composite materials or to act as thermal-expansion compensators.

The present work is the most up-to-date summary of the current range of negative thermal expansion materials and of the associated mechanisms.

WCNR-11

Eds. Ulf Garbe, Filomena Salvemini and Joseph J. Bevitt

Neutron radiography represents a powerful non-destructive testing technique that is still very much in development. The book reveals the amazing diversity of scientific and industrial applications of this technique, the advancements of the state-of-art neutron facilities, the latest method developments, and the expected future of neutron imaging.

Neutron Imaging, Neutron Radiography Facilities, Neutron Microscope, Neutron Computed Tomography, Digital Neutron Imaging, Fast-Neutron Imaging, Industrial Digital Camera, Scintillators for Neutron Diffraction Measurements, Modulated Beam Imaging, Neutron Grating Interferometry, Neutron Transmission Spectrum,

Neutron Activation Analysis, Fission Neutron Tomography, Examination of Nuclear Fuels, Hydrogenous Samples, Archeological Objects, Japanese Swords, Silver Coins from Ancient Greece

New Polymeric Composite Materials

Environmental, Biomedical, Actuator and Fuel Cell Applications

Eds. Inamuddin, Ali Mohammad and Abdullah M. Asiri

Polymeric and composite materials are in high demand and their continuing development is making our life style more comfortable. The present book reviews the latest research results in the field and explores the technological advantages of these materials in environmental, biomedical, actuator and fuel cell applications.

Also discussed are applications of polymeric and composite materials in such areas as shape memory polymers, green composites for artificial organs, geomembranes for the safe disposal of waste, removal of heavy metals and dyes, adhesives, sensors and actuators, fuel cells, membrane and environmental sustainability, etc.

Non-Conventional Materials and Technologies

NOCMAT for the XXI Century

Eds. Khosrow Ghavami, Pedro Jesús Herrera Franco

The book presents new research in the area of biobased “green composites”. Biobased materials involve renewable agricultural and forestry feedstocks, including wood, agricultural waste, grasses and natural plant fibers. These lignocellulosic materials are composed mainly of carbohydrates such as sugar and lignin, cellulose, vegetable oils and proteins. Much research is concerned with renewable materials such as bamboo, vegetable fibers, soil composites and recycled materials such as rice husk ash and sugar cane ash. The general aim here is to use renewable and non-polluting materials in ways that offer a high degree of sustainability and

preserve the remaining natural resources for future generations.

Biobased Materials, Renewable Materials, Non-polluting Materials, Sustainability, Wood, Agricultural Waste, Grasses, Natural Plant Fibers, Lignocellulosic Materials, Carbohydrates, Sugars, Lignin, Cellulose, Vegetable Oils, Proteins, Bamboo, Vegetable Fibers, Soil Composites, Recycled Materials, Rice Husk Ash, Sugar Cane Ash, Fiber-reinforced Concrete, Post-disaster Reconstruction, Guadua Fibers, Prefabricated Bamboo Guadua Panels, Multi-Level Bamboo Structures, Alkaline Activated Cements, Polymer Residues Reinforced with Glass Fiber, Composites Reinforced with Vegetal Fibers, Sisal Fibers

Non-Electrolytic Water Splitting

David J. Fisher

The book focuses on the direct production of hydrogen, using solar energy. Photocatalytic water-splitting by exposing semiconductors to sunlight is one of the most promising routes. The range of materials and other non-electrolytic methods are also reviewed. The book references 205 original resources and includes their direct web link for in-depth reading.

Non-Linear Optical Materials

R. Saravanan

Non-linear optical materials have widespread and promising applications, but the efforts to understand the local structure, electron density distribution and bonding is still lacking. The present work explores the structural details, the electron density distribution and the local bond length distribution of some non-linear optical materials. It also gives estimation of the optical band gap, the particle size, crystallite size, and the elemental composition from UV-Visible analysis, SEM, XRD and EDS of some non-linear optical materials respectively. <https://www.mrforum.com/product/non-linear-optical-materials>.

Optical Furnaces for Crystal Growth

Gerhard Kloos

Well-defined single crystals of high quality are of importance in some branches of industry as well as in fundamental investigations of materials research. This monograph is devoted to the growth of crystals using optical furnaces. Optical furnaces can be understood and designed making recurrence to concepts that stem from analytical geometry. Therefore, these ideas are presented taking both “faces” of analytical geometry into account.

Organic Bioelectronics for Life Science and Healthcare

Eds. Akio Yasuda and Wolfgang Knoll

Novel bio-electronic devices have a great potential for gathering biological information such as vital signs, cell behavior, protein and DNA molecule concentrations. The book presents concrete examples and shows that there are lots of sensing targets still remaining to be handled. Organic materials offer high sensitivity, flexibility and biocompatibility, and can be prepared by novel fabrication methods such as printing and coating at low cost. Part 1: OFET-based sensors. Part 2: Graphene-based materials and sensor device applications. Part 3: Applications of bio-sensing technologies, inkjet printing, tests for stroke monitoring, etc.

Organic Pollutants in Wastewater I

Methods of Analysis, Removal and Treatment

Eds. Inamuddin, Abdullah M. Asiri, Ali Mohammad

Wastewater represents an alternative to freshwater if it can be treated successfully for re-use applications. Promising techniques involve photocatalysis, adsorption, nanocomposites, and membranes. The book focusses on the following topics:

Effluent detoxification and degradation kinetics of organic dyes using Fenton and photo-Fenton processes. Degradation of methylene blue using nanocomposites as a potential photocatalyst. Agricultural and agro-industries based wastes as low-cost biosorbents. Use of carbon quantum dots (CQDs) for photocatalytic degradation of organic pollutants. Detection, determination and

removal of phenolic compounds from wastewater. Decomposition of organic dyes via photocatalysis. Oxide-semiconductor nanomaterials for photocatalytic wastewater purification. Photocatalytic efficiency of various ZnO composites for degradation of organic pollutants. TiO₂ based nanocomposites. Membrane filtration processes for the removal of organics from industrial wastewater.

Phosphate Coatings Suitable for Personal Protective Equipment

Diana Petronela BURDUHOS-NERGIS, Costica BEJINARIU, Andrei Victor SANDU

Phosphate coatings can improve the corrosion resistance of carbon steel equipment such as carabiners. The specific porosity of the phosphate layer allows the deposition of an elastomer-based paint for absorbing mechanical shocks. The book is relevant for fundamental and applied research in the field of protective phosphate layers and their industrial applications. It also describes how to design and develop phosphating solutions that differ in the type and concentration of metal ions dissolved in phosphoric acid.

Photocatalysis

Advanced Materials and Reaction Engineering

Eds. Gaurav Sharma and Amit Kumar

Photocatalysis is important in fighting environmental pollution, such as pharmaceutical effluents, dyes, pesticides and endocrine disruptors. It is also used for the production of clean energy, e.g. by way of hydrogen production from watersplitting, or CO₂ conversion into fuels. Further, photocatalytic N₂ fixation is promising for achieving sustainable ammonia synthesis. The book discusses new materials and reaction engineering techniques, such as heterojunction formations, composites, ion exchangers, photocatalytic membranes, etc.

Point Defects in Group IV Semiconductors

common structural and physico-chemical aspects

S. Pizzini

A self-consistent model of point defects requires a reliable connection with the experimentally deduced structural, spectroscopic and thermodynamic properties of the defect centres, to allow their unambiguous identification.

This book focuses on the properties of defects in group IV semiconductors and seeks to clarify whether full knowledge of their chemical nature can account for several problems encountered in practice.

It is shown how difficult the fulfilment of self-consistency conditions can be, even today, after more than four decades of dedicated research work, especially in the case of compound semiconductors, such as SiC, but also in the apparently simple cases of silicon and germanium. The reason for this is that the available microscopic models do not yet account for defect interactions in real solids.

Radiation Effects in Silicon Carbide

A.A. Lebedev

The book reviews the most interesting research concerning the radiation defects formed in 6H-, 4H-, and 3C-SiC under irradiation with electrons, neutrons, and some kinds of ions. The electrical parameters that make SiC a promising material for applications in modern electronics are discussed in detail.

Specific features of the crystal structure of SiC are considered. It is shown that, when wide-bandgap semiconductors are studied, it is necessary to take into account the temperature dependence of the carrier removal rate, which is a standard parameter for determining the radiation hardness of semiconductors.

Data are also presented regarding the degradation of particular SiC electronic devices under the influence of radiation and a conclusion is made regarding the radiation resistance of SiC. Lastly, the radiation hardness of devices based on silicon and silicon carbide are compared.

Shape Memory Alloys

SMA 2018

Eds. Vasily Buchelnikov, Vladimir Sokolovskiy, Mikhail Zagrebina, Olga Miroshkina

The book presents selected, peer reviewed papers from the 3rd International Conference on “Shape Memory Alloys” (SMA 2018). Covered are: Physical, mechanical and functional properties of shape memory alloys. Structure and martensitic phase transformations. Theory and mathematical modelling. Materials design and calculations of functional properties. Design, synthesis and functional properties of novel materials. Manufacturing technology and applications of shape memory alloys.

Shape Memory Alloys, Martensitic Transformations, Biocompatible Porous Materials, Ni-Mn Intermetallic Alloys, Superelastic Alloys, Ti-Ni Shape Memory Alloys, Novel Superelastic Ti-Zr-Based Alloys, Solid State Cooling, Pulsed Electron Beam Treatment, Surface Modification, Carbon Polytypes, Fluorographene, Diamond-Like Phase Transformations, Solid Oxide Fuel Cell, Multiferroics, Fe-Ga Phase Diagram, Fe-Ge Phase Diagram, Fe-Al Phase Diagram

Sodium-Ion Batteries

Materials and Applications

Eds. Inamuddin, Rajender Boddula, Mohd Imran Ahamed and Abdullah M. Asiri

Sodium-ion batteries are likely to be the next-generation power sources. They offer higher safety than lithium-ion batteries and, most important, sodium is available in unlimited abundance. The book covers the fundamental principles and applications of sodium-ion batteries and reports experimental work on the use of electrolytes and different electrode materials, such as silicon, carbon, conducting polymers, and Mn- and Sn-based materials. Also discussed are state-of-the-art, future prospects and challenges in sodium-ion battery technology.

Sodium-Ion Batteries, Lithium-Ion Batteries, Carbon Nanofibers, Conducting Polymers, Electrode Materials, Electrolytes, Graphene, Carbon Anodes, Magnetic Nanomaterials, Mn-based Materials, Sn-based Materials, Na-O2 Batteries, NASICON Electrodes, Organic Electrodes, Polyacetylene, Polyaniline, Polyphenylene, Redox Mediators, Reversible Capacity, Singlet Oxygen, Superoxide Stability

Structure Induced Anelasticity in Iron Intermetallic Compounds and Alloys

Igor S. Golovin, Anatoly M. Balagurov

Different anelastic phenomena are discussed in this book with respect to iron-based binary and ternary alloys and intermetallic compounds of Fe₃Me type, where Me are α -stabilizing elements Al, Ga, or Ge. An introduction into anelastic behavior of metallic materials is given, and methods of mechanical spectroscopy and neutron diffraction are introduced for the better understanding of structure-related relaxation and hysteretic phenomena.

To characterize structure and phase transitions - both first and second order - in the studied alloys XRD, TEM, SEM, MFM, VSM, PAS, DSC techniques were used. Considerable emphasis is placed on in situ neutron diffraction tests that were performed with the same heating and cooling rates as the internal friction measurements.

We discuss (1) Anelasticity, Damping Capacity, Magnetostriction, Structure Transitions, Phase Transitions, Fe-Based Alloys, Intermetallic Compounds, Mechanical Spectroscopy, In Situ Neutron Diffraction

Study of Biocompatible and Biological Materials

Can they be influenced by external factors?

Emilia Pecheva

The book focuses on the topic of bio-mineralization and discusses the properties of biological, biocompatible and biomimetic materials. The aim is to improve the performance of these materials. This can be accomplished by tailoring their surface properties by means of external factors and various surface modification techniques. In this way, the growth of biomaterials on surfaces can be influenced beneficially.

Titanate Based Ceramic Dielectric Materials

R. Saravanan

Barium titanate is one of the most important electronic materials; due to its high permittivity, low dielectric loss and high tunability. The book presents research results concerning the electron density distribution in a number of doped barium titanate ceramic materials using experimental X-ray diffraction data, UV-visible spectrophotometry (UV-vis), scanning electron microscopy (SEM) and energy dispersive X-ray spectroscopy (EDS). The analysis of interatomic bonding and electron density distribution is important for predicting the properties of potentially important materials and has previously been lacking for the materials studied.
